

RASMUS KAMPMANN

Power BI Developer & Data Analyst

Odense, Denmark · [phone] · [email] · LinkedIn · rasmuskampmann.com · GitHub

PROFILE

Power BI developer and data analyst with 3+ years of commercial experience across sales, operations, and finance. I build the path from scattered, untrusted data to decisions: integration, a single source of truth, semantic model, Power BI, and automation where AI removes friction. I see reporting as one connected process from source data to decision, not as individual reports. Most of my experience is from small companies and my own: close to the decisions, with ownership all the way. Used to international environments in Danish, English, and Spanish. AI is part of how I work: built into the data layer, where it removes manual work. Seeking roles as Power BI developer, BI developer, and data analyst in Denmark.

CORE COMPETENCIES

Reporting & BI: Power BI, DAX, semantic modeling, dashboard ownership, Excel (advanced)

Data & systems: SQL (working level), PostgreSQL, Supabase, Microsoft Fabric (SQL Database, pipelines, notebooks, Direct Lake), Power Query, data modeling, connecting source systems and API sources

Commercial analysis: forecasting and predictive modeling (scoring, classification), budget input, channel and customer profitability, KPI definition, variance follow-up

AI & automation: Claude Code, GitHub, Copilot, LLM extraction with human approval, Power Automate, n8n, Python, automation of manual reporting

Cross-functional: stakeholder dialogue, requirements specification, communication to management, documentation

EXPERIENCE

Veginova Seeds · family-owned seed company, Odense

Aug 2023-present

International growers, distributors, and production partners across Europe and Latin America. (Spring 2026: role at Digi-Tal Regnskab, see below.)

Power BI Developer

Jun 2026-present

Back at Veginova with responsibility for BI and reporting across sales, operations, and production. Driving the consolidation of the entire data landscape into one unified Microsoft ecosystem.

- Architecture: Fabric SQL Database as the operational data layer, OneLake and Direct Lake semantic model, Power BI as the decision layer.
- Automated line-level invoice extraction with the Claude API: confidence scores and human approval via Power BI translytical task flows. Power Automate for event-driven file synchronization. Excel inputs as locked tables on SharePoint.
- Sales and contribution margin dashboards, a seasonal sales forecast (Python notebooks in Fabric), and one unified source of truth reconciled to the accounts. Published as case studies at rasmuskampmann.com.

Stack: Microsoft Fabric · Power BI · DAX · T-SQL · Python · Power Automate · Claude Code

Data Analyst

May 2025-Feb 2026

Promoted to ownership of reporting and data infrastructure across sales, operations, and production, and the analyses management steered by.

- Owned the shared data foundation: Power BI dashboards, SQL data models, and automated pipelines as one source of truth for sales, operations, and production.
- Improved KPI accuracy by 40%+: standardized metric definitions across teams and reconciled source data so dashboards matched the underlying systems.
- Reduced reporting time by 10+ hours per week: stabilized broken workflows, consolidated data sources, and built repeatable pipelines instead of weekly manual rebuilds.

Stack: SQL · Power BI · DAX · Python · Excel · Supabase · Claude Code

Marketing & Operations

Aug 2023-May 2025

Broad commercial role in the family business. The foundation for everything I do with data today.

- B2B marketing and lead sourcing (Clay) toward international wholesale, distributor, and grower customers. Trade fairs and customer events in Denmark.

- Production visits in Costa Rica, Panama, and Mexico. In Costa Rica also company establishment and dialogue with local partners.
- Connected ERP, CRM, and operational tools into reliable data flows. The role grew into the data work: the transition to data analyst came from there.

Stack: Microsoft Office · Clay · n8n · Supabase · Apify · API sources · GitHub

Digi-Tal Regnskab · Data Analyst (fully remote)

Feb-May 2026

Built the commercial data infrastructure in four months: CRM, ad, and registry data unified into one source of truth, and the models and analyses on top. Recruited on the strength of the pipeline work in Sira Logic.

- Commission and forecast model: rebuilt the commission structure to weight MRR and LTV, removing the incentive to discount subscriptions to close.
- Revenue channel analysis: close rate, conversion, and pipeline velocity across paid, outbound, and inbound, with revenue figures reconciled to the accounts.
- Predictive models: ICP and lead scoring with strong holdout performance, plus an ML model predicting prospects' accounting software from public registry data (~75% accuracy).
- Churn and segmentation analysis: customer and prospect base segmented into active, lead, lost, and inactive cohorts; surfaced funnel drop-off and patterns behind closed deals.

Resigned in connection with the family's move back to Denmark. The role was fully remote, and I wanted a workday physically close to the business.

Stack: SQL · Python · PostgreSQL · n8n · Excel · Pipedrive · Clay · Claude Code

Sira Logic · Data & AI Consultant (independent, alongside Veginova)

Jun 2024-Aug 2025

Own consulting business: end-to-end data and automation systems for B2B companies, from data collection to operationalized scoring in the clients' CRM.

- Scraping, AI-assisted enrichment and qualification, scoring, CRM automation, and lead systems combined in one pipeline. Qualification accuracy +30-40%.
- Custom web scraping for industry-specific sources. Owned the full cycle: sales, scoping, build, deployment, handoff.
- The work here led directly to the role at Digi-Tal.

Stack: SQL · Python · n8n · Clay · Apify · HubSpot · GoHighLevel · Excel

Damstahl Danmark · Marketing & Digital Graduate (student job, part-time during BBA)

Jan-Aug 2023

Part-time student job alongside the BBA. Product and marketing data in ERP and CRM across European markets. Excel dashboards for campaign reporting and standardized regional data processes.

EDUCATION

Bachelor of Business Administration (BBA), Aarhus BSS, Aarhus University

Aug 2020-Jun 2023

Exchange semester: Universidad del Pacífico, Lima, Peru

Aug-Dec 2022
