SUMMARY

Power BI developer and BI specialist with 3+ years of commercial experience across sales, operations, and finance. I come from the commercial side: I've worked in the functions dashboards serve, so I know what the numbers mean and how the business actually uses them. I build end to end, and Microsoft Fabric is where that comes together: ingestion, data modelling, semantic models, and reporting in one platform, with SQL and Python underneath. Most of my experience is from small companies, startups, and my own business, close to the decisions and owning work from requirements to user training. International B2B background. Native Danish, full professional English, professional Spanish.

CORE STACK

Reporting & BI: Power BI (DAX, semantic models, Power Query, RLS), Excel (advanced)

Microsoft ecosystem: Microsoft Fabric (Dataflows Gen2, Data Pipelines, Python notebooks, Direct Lake semantic models, Activator), Power Automate, OneLake

Data Infrastructure: SQL, PostgreSQL, Supabase, ETL pipelines, data modeling, reconciliation gates

Analysis & Modelling: Python, pandas, scikit-learn, XGBoost, SHAP, forecasting, funnel analytics

AI & Automation: Claude Code, Claude API, MCP, LLM pipelines, n8n, FastAPI, GitHub Actions

CRM & Commercial Tooling: Pipedrive, HubSpot, Clay, HeyReach

Cross-functional: Stakeholder management, requirements translation, documentation, user training, presenting to leadership

PROFESSIONAL EXPERIENCE

Data Analyst & BI Specialist

Veginova Seeds

Jun 2026 – Present
Odense, Denmark · Full-time

Back at Veginova to build the data, BI, and reporting the business runs on. Extends the reporting stack I owned in 2025 into the finance and production layer.

- Built the finance source of truth in Power BI and PostgreSQL by modelling invoice lines into a semantic model reconciled line by line to the official accounts, making profit per product and per customer visible for the first time.
- Built the production planning engine in SQL that sets what to produce, how much, and when on a one-year seed lead time. It reproduces the planner's own numbers exactly and tests a scenario before seed is committed.
- Shipped forecasting into the planning model with Python and SQL views, so next season's production need updates on every sale instead of going stale in a spreadsheet.
- Designed the Microsoft Fabric migration path for the reporting stack (Dataflows Gen2 ingestion, warehouse models, notebook forecasting, Direct Lake semantic models), with the current reconciliation totals as the acceptance test.

Stack: Power BI, SQL, PostgreSQL, Python, Supabase, Claude Code

Data Analyst & Commercial Analytics

Digi-Tal Regnskab

Feb 2026 – May 2026
Denmark · Hybrid

Owned the data work behind a Danish SMB accounting and fintech firm: ICP, scoring, software detection, and full-channel revenue analysis, from raw source to scores feeding sales.

- Built an ML classifier in scikit-learn on Playwright-scraped features that identified a prospect's accounting software across the Danish SMB market at holdout AUC 0.75 (permutation test $p < 0.0001$), surfacing high-fit prospects on competing platforms.
- Broke down close rate, conversion, meeting time, and pipeline velocity across five channels (Meta, Google, LinkedIn outbound, cold calling, inbound) in SQL and Python, identifying which channels drove customers and which burned budget.
- Built ICP and predictive lead-scoring models on CRM and Danish business-registry data that cut low-quality leads reaching sales and sharpened outbound prioritisation.
- Rebuilt the sales commission model with forecasting weightings toward subscription and MRR, removing the incentive to discount monthly deals to close.
- Shipped the scores into an end-to-end LinkedIn pipeline (scraping, enrichment, scoring, sequencing) with ~50% cold acceptance.

Stack: SQL, Python, Power BI, Pipedrive, Clay, Playwright, Apify, HeyReach, Claude Code

Data Analyst & BI Specialist

Veginova Seeds

May 2025 – Feb 2026
Odense, Denmark · Hybrid

Promoted into BI ownership: the data infrastructure, Power BI dashboards, and analytics across sales, operations, and production.

- Improved KPI accuracy by 40%+ by standardising metric definitions in the semantic model across sales, operations, and production and fixing the source data underneath the dashboards.
- Cut reporting time by 10+ hours per week by replacing weekly manual rebuilds with repeatable SQL and Power BI pipelines.
- Owned the single source of truth: Power BI dashboards, SQL data models, and automated reporting pipelines across the business.
- Resolved data inconsistencies across ERP, CRM, and operational tools by finding where the flows broke and rebuilding them with reliable source logic.

Stack: SQL, Power BI, DAX, Python, Excel, Supabase, Claude Code

Marketing Specialist & RevOps

Veginova Seeds

Aug 2023 – May 2025
Odense, Denmark · Hybrid

Started in marketing and lead sourcing, moved into RevOps. Built the operational data layer between sales, marketing, and production that grew into the Data Analyst role.

- Built automated data collection and enrichment pipelines in Clay and n8n for prospecting, replacing manual spreadsheet work.
- Connected ERP, CRM, and operational tools into reliable cross-functional data flows, and built the reporting leadership used for weekly decisions.

Stack: SQL, Power BI, Clay, n8n, Supabase, Apify, Excel

Founder · Data & RevOps

Sira Logic

Jun 2024 – Aug 2025
Remote · Self-employed

Service business building AI-driven lead generation, enrichment, and CRM automation for B2B companies. It closed without customers; it's where I learned which automation is worth building.

- Built lead enrichment and scoring workflows wiring collection, enrichment, and qualification into one pipeline, improving qualification accuracy by 30–40%.
- Integrated HubSpot and GoHighLevel with external data sources and outreach tools so prospects flowed from collection to sales-ready.

Stack: SQL, Python, Clay, n8n, Apify, HubSpot, GoHighLevel, HeyReach

AI & LLM Data Analyst

Outlier

Jan 2025 – Jan 2026
Remote · Freelance

- Reviewed and annotated 1,000+ Danish-language AI conversations, feeding model failure patterns back into training data. The same understanding of where LLMs break powers the AI scoring workflows I build today.

Marketing & Digital Graduate

Damstahl Danmark

Jan 2023 – Aug 2023
Region Midtjylland, Denmark · Part-time

- Managed product and marketing data in ERP and CRM platforms across European markets and built Excel dashboards for campaign reporting.

EDUCATION

Bachelor of Business Administration (BBA)

Aarhus BSS, Aarhus University

Aug 2020 – Jun 2023
Aarhus, Denmark
